Introduction

Magento 2 Multiple Warehouses will help merchants manage their stock locations and products for their store. Store admins can create multiple warehouses, each with their own location and contact details. They can also assign products to available warehouses and manage them easily on their admin catalog page. Shipping rules can be seamlessly defined, shipping methods will be created based on those rules.

Highlight Features

The extension is packaged with the following features:

- Admin can create warehouses and edit their location and contact information.
- Admin can assign a specific product to multiple warehouses, each with a quantity.
- Admin can define an array of allowed shipping method applied for a specific shipping carrier in a warehouse.
- Admin can define a default warehouse.
- Admin can manually combine a shipping method allowed from each warehouse to make up a combined shipping method.
- An array of shipping method names can be defined. These names will be applied for shipping methods that have been combined automatically.

System Requirements

Your store should be running on Magento 2 Community Edition version 2.0.x or newer.

Configuration

1. Shipping method configuration

Firstly, you need to set the shipping method configuration to use Multiple Warehouse extension. Go to **Stores > Sales > Shipping Methods > Magenest Multiple Warehouse**.

☐ Use system value

In this config, the admin can specify the following parameters:

- Whether the methods can be displayed on checkout or not.
- Carrier name
- Default warehouse. The warehouse must be defined first.
- Maximum number of automatic combined methods.

- Package mod. This option will help merchants define the algorithm for deviding an order into multiple packages. In the current version of the extension, only Shortest Distance option is available.
- Handling fee and rules

In the current version of the extension, Fedex is the only available carrier. There are some Fedex's unique parameters that merchants have to define, including:

- Packaging
- Dropoff
- Weight Unit
- Maximum Package Weight
- Residential Delivery
- Hub ID

Main Functions

- Create a new warehouse

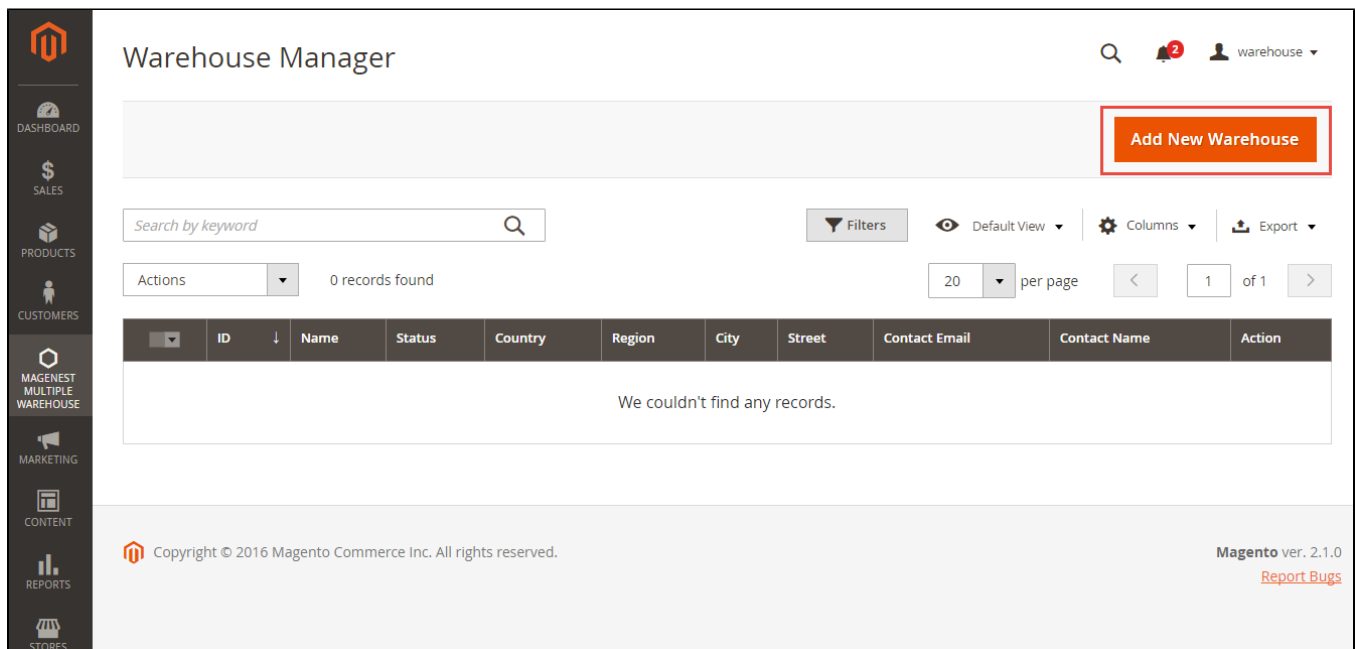

After setting configuration completely, admins will need to create some warehouses used by the store owner.

To create warehouses, admin need to choose **Magenest Multiple Warehouse** and click on **Warehouses**.

Then, the **Warehouse Manager** page will be shown. Here admin can see and manage the list of all the created warehouses.

If merchants want to create a new warehouse, they need to click on **Add New Warehouse** button.

At **New Warehouse** tab, admins will need to enter some fields regarding their warehouses, including:

- Name: the Warehouse name.
- Status: Where the warehouse have used or not.
- Country.
- Region.
- Zip/Postal Code.
- City.
- ...

Click on **Save Warehouse** button to complete.

Report Bugs

After choosing each of methods corresponding with each of your warehouses, go to **Details** tab. Admin can set the new name as well as method code displayed on customer's orders.

For example: Your store have three warehouses, including:

- Magenest's Warehouse 1.
- Magenest's Warehouse 2.

- Magenest's Warehouse 3.

Then, you will need to set each methods corresponding with each warehouses and set name for them according to your wish (Magenest's Software). If customers make a purchases having products from these warehouses with methods set, the system will merge them and display a only method name instead of showing all on customer's order as well as magento back end automatically.

The screenshot shows the 'Edit Combination' page. On the left is a sidebar with navigation icons for Dashboard, Sales, Products, Customers, Magenest Multiple Warehouse (highlighted), Marketing, Content, and Reports. The main header includes a search icon, a notification bell with '2', and a user profile icon labeled 'warehouse'. Below the header is a toolbar with buttons: Back, Delete, Reset, Save and Continue Edit, and a prominent orange Save button. The page content is divided into two sections: 'COMBINATION DETAILS' on the left and 'Settings' on the right. Under 'COMBINATION DETAILS', there are two sub-sections: 'Details' (active) and 'Combine'. The 'Settings' section contains two input fields: 'Method Name' with the value 'Magenest Shipping' and 'Method Code' with the value 'magenest123'. The footer contains the copyright notice 'Copyright © 2016 Magento Commerce Inc. All rights reserved.' and the version 'Magento ver. 2.1.0' with a 'Report Bugs' link.

- **Automatic Combine Method Naming**

Go to **Magenest Multiple Warehouse > Automatic Combine Method Naming**. At Automatic Combine Methods Naming page, admins will enter some method name corresponding with method code that they wish. Then, the system will be generate these methods at Front End Magento 2.

For example:

Here is the five methods set by admins at Magento back end. When customer makes a purchase, there are five name options corresponding with five options set at Magento Front End allows they to choose the appropriate shipping method.

The screenshot shows the 'Automatic Combine Methods Naming' page. The sidebar and header are identical to the previous screenshot. The main header has buttons: Back, Reset, and a prominent orange Save button. The page content is titled 'Methods Naming' and contains a list of six input fields arranged in three rows. Each row has a label on the left and an input field on the right. The first row has 'Method Name 1' and 'Magenest Shipping 1'. The second row has 'Method Code 1' and 'magenest1'. The third row has 'Method Name 2' and 'Magenest Shipping 2'. The fourth row has 'Method Code 2' and 'magenest2'. The fifth row has 'Method Name 3' and 'Magenest Shipping 3'. The sixth row has 'Method Code 3' and 'magenest3'.
