

PDF Invoice Installation Guide

- Before installing this module, you need to install PHP library mpdf by running the following command:

```
composer require mpdf/mpdf
```

- Now you can start the installation process with the extension. First of all, open FileZilla, log in to your host as follows:

- In the above example we switched the local site to the extension directory, and the remote site to the code directory. Now on the remote site window, inside app/code directory, create a folder named **Magenest** and go inside it. Now on your local site window, right-click on **Extension Name** and click **Upload**. The extension will be uploaded onto your host in a few minutes.

- The second method will require you to compress the extension into .zip or .tar.gz format, then execute the following command in your Command Line /Terminal:

```
scp <path to your extension> <ssh server>:<path to Magenest directory>
```

- Then log into your ssh server, go to Magenest directory and execute the following command to decompress the module:

```
unzip <.zip compressed extension>
```

Or

```
tar -xzf <.tar.gz compressed extension>
```

- Now go to your **Magento root directory**, say it's named **magento2**, and execute the following commands:

```
php bin/magento setup:upgrade
```

```
php bin/magento setup:di:compile
```

```
php bin/magento setup:static-content:deploy
```

- After that, your Command line/Terminal window might look like this:

```

Module 'Magento_BundleSampleData':
Module 'Magento_Rss':
Module 'Magento_DownloadableSampleData':
Module 'Magento_Captcha':
Module 'Magento_OfflineShippingSampleData':

Please re-run Magento compile command
[root@centos-2gb-sgp1-01 magento2]# sudo chmod -R 777 var pub
[root@centos-2gb-sgp1-01 magento2]#

```

+ Finally, you need to flush the cache by either type this into the Command Line/Terminal:

```
php bin/magento cache:flush
```

Or go to **System > Cache Management**. Click the following buttons to completely clear the store cache:

1. Flush Magento Cache
2. Flush Cache Storage
3. Flush Catalog Images Cache
4. Flush JavaScript/CSS Cache

The screenshot shows the Magento 2 Admin Panel's 'System' section. The 'Cache Management' tool is selected from the sidebar. The main content area displays a table of cache types, all of which are currently 'DISABLED'. A red box highlights the 'Flush Magento Cache' button in the top right corner.

Description	Tags	Status
Various XML configurations that were collected across modules and merged.	CONFIG	DISABLED
Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
Page blocks HTML.	BLOCK_HTML	DISABLED
Collection data files.	COLLECTION_DATA	DISABLED
API interfaces reflection data.	REFLECTION	DISABLED
Results of DDL queries, such as describing tables or indexes.	DB_DDL	DISABLED
Entity types declaration cache.	EAV	DISABLED
Integration configuration file.	INTEGRATION	DISABLED
Integrations API Configuration	INTEGRATION_API_CONFIG	DISABLED
Page Cache	FPC	DISABLED
Translations	TRANSLATE	DISABLED

+ Now you can go to your store and check if the extension is working as expected.
