Introduction

Highlight Features

- Indexing the store content, including products and categories, and neatly store them in the server.
- Specify a list of synonyms for better search relevance.
- Specify a list of stopwords for less unrelevance search results.
- Specify maximum number of results.
- Specify replace words which will be applied in search queries.
- Specify frequently searched terms (future version).
- Specify related search terms (future version).
- Specify additional index and search daemon configuration.
- Fast and relevant search results.

System Requirements

Your store should be running on Magento 2 Community Edition version 2.1.

Main Functions

We have created Magenest Sphinx menu which enable admins to manage all of things regarding Sphinx extension for Magento 2.

- **Configuration**

First of all, you need to set configuration before using the extension.

Go to **Stores > Configuration > Sphinx Search > Search Configuration**.

There are three drop-down menus will be shown, include:

- Search Engine Configuration.
- Host Configuration.
- Search Settings.

+ Search Engine Configuration

The extension provides three options, include: **My SQL**, **Sphinx Engine** and **Built-in Sphinx Engine**. Admin will pick one of them to make as default for searching.

We recommend that you should choose the option named **Sphinx Engine**.

+ Host Configuration

At Host configuration drop-down list, there are some fields admin need to set, includes:

- + Sphinx Host: localhost (Default).
- + Sphinx Post: 9315 (Default).
- + Sphinx Bin Path: searchd (Default).

The screenshot displays the Magento 2 Configuration interface. On the left is a vertical sidebar with navigation icons for Dashboard, Sales, Products, Customers, Magentest Sphinx, Marketing, Content, Reports, Stores, System, and Find Partners & Extensions. The main content area is titled 'Configuration' and includes a search bar, a notification bell with '5' alerts, and a user profile 'admin'. Below the title bar, there's a 'Store View' dropdown set to 'Default Config' and a 'Save Config' button. A left-hand menu lists categories: GENERAL, CATALOG, CUSTOMERS, SALES, SPHINX SEARCH (highlighted), SERVICES, and ADVANCED. Under 'SPHINX SEARCH', 'Search Configuration' is selected. The 'Host Configuration' section is expanded, showing three input fields: 'Sphinx Host' (localhost), 'Sphinx Port' (9315), and 'Sphinx Bin Path' (searchd). A red circle with the number '2' highlights the 'Sphinx Host' field. Below these fields are three buttons: 'Check Connection Status', 'Restart Sphinx Daemon', and 'Reset'. At the bottom of this section is an 'Additional Configuration' link. The 'Search Settings' section is partially visible at the very bottom.

+ **Restart Sphinx Daemon:** In the first use, admins will need to click on **Restart Sphinx Daemon** button to start using. A notification will be shown to inform you that Sphinx Daemon works successfully.

Restart Sphinx Daemon

Sphinx daemon successfully restarted.

Reset

+ Check connection status: After clicking on **Restart Sphinx Daemon** button, admin will need to check connection status by clicking on **Check Connection Status** button. A notification will be shown to inform you that Sphinx search extension and your store have connected successfully together.

Check Connection Status

◀ ▶

+ **Reset:** Admin will click on the **Reset** button if they want to make all of things to the original status.

+ Additional Configuration

If admins have knowledge about the Sphinx platform, they can type text in HTML format in the two fields:

- ➖ Additional index configuration.
- ➖ Additional searchd configuration.

+ Search Settings

+ Wildcard search: There are 4 options enabled:

➖ Enabled (*word*) - This option allows to find products and show them in the search results if the search phrase is contained in the beginning, end or in the middle of the product.

Example: If the search query is "age", search results can be: "agent", "Magenest" and "image".

➖ Enabled at end (word*): This option allows to find products which only start by the search phrase.

Example: If the search query is "age", search results can be: "agent" or "agency", but not: "image" or "Magenest".

➖ Enabled at start (*word): This option allows to find products which only end by the search phrase.

Example: If the search query is "age", search results can be: "image" or "Sage", but not "Magenest" or "agent".

➖ Disabled: This option allows to show all search results exactly as the search phrase.

Example: If the search query is "age", search result can be only for "age", but not for "agent" or "Magenest" or "image"

+ Result Limit: This feature allows admin to set maximum number of the search results.

? Example:

If admins enter 100 at Result Limit field, the search results will be shown to maximize 100 results.

+ **Wildcard Exceptions:** The list of words (characters) for which no wildcard rules will be applied.

? *Example:*

If Wildcard search is enabled, when customers search query '**Extension**' then the search results will also return products with "**Extensions**" word. If admins add '**Extension**' to exceptions list, search will return only '**Extension**' results.

If admin want to add more words into Wildcard Exception, admins only click on **Add** button to add.

+ **Replace words in search query**

The words from the left column will be replaced by words from the right column.

? *Example:*

If the search phrase is "**Magen**" entered by customers then "**Magenest**" is the real word searched by the search engine.

+ **Long Tail Expressions.**

- **Stopwords**

+ Go to **Magenest Sphinx > Stopwords**. Then a **Stopword** page will be shown allowing admins to add stopwords into database as well as manage them.

Stopwords are words which are not really useful for search because they have little lexical meaning or ambiguous meaning. This feature allows the search engine to remove these words from the search phrase automatically.

+ Add New Stopword

In order to add a new stopword, please click on **Add New Stopword** button. Then a **New stopword** page will be shown.

There are two fields that admins need to set, include:

- ➔ Stopword: Admins need to enter a word that they want to remove this word from the search phrase entered by customer.
- ➔ Store: Default Store View.

Please click on **Save** button to complete.

? Example:

"a" is a stopword added by admins on Magento's backend.

If the search phrase is " **a laptop**", the system will be removed "a" from the search phrase. "**laptop**" is really the searched word (**not** "a laptop").

- **Synonyms**

+ Go to **Magenest Sphinx > Synonyms**.

Synonyms are words which have the same or nearly the same meaning. This feature allows customers to find both the search phrase entered and its synonyms.

+ Add a new synonym

In order to add a new synonym, please click on **Add New Synonym** button. Then a **New term** page will be shown which allows admins to add manually a word with its corresponding synonyms according to the store owner's wish.

The screenshot shows the 'Synonym' management page in the Magenest Sphinx admin panel. The left sidebar contains navigation links for Dashboard, Sales, Products, Customers, Magenest Sphinx, Marketing, Content, and Reports. The main content area has a search bar and a table of synonyms. A yellow banner at the top indicates 'You saved the synonym.' The table has columns for Term, Synonyms, and Store. One record is shown with Term 'Big', Synonyms 'Large', and Store 'Main Website, Main Website Store, Default Store View'. An 'Add New Synonym' button is highlighted in the top right.

	Term	Synonyms	Store
<input type="checkbox"/>	Big	Large	Main Website Main Website Store Default Store View

There are three fields to be set:

- ➖ Term: Admins will enter the word that they want to create the list of synonyms for it.
- ➖ Synonyms: The list of replacing synonyms (use comma as separator).
- ➖ Store: Default Store View.

Please click on **Save** button to complete.

? Example:

The search phase is "Big". The search results will show all products regarding both "Big" and "Large".

+ Categories

Click on Categories, then there are two tabs will be shown, include:

➔ General Index Settings

The screenshot shows the 'Edit Index 'Categories'' page in the Magenest Sphinx admin interface. The left sidebar contains navigation links: DASHBOARD, SALES, PRODUCTS, CUSTOMERS, MAGENEST SPHINX, MARKETING, and CONTENT. The main content area has a top bar with a search icon, a notification bell with a red '5', and a user profile 'admin'. Below this is a toolbar with buttons: Back, Delete, Reset, Save and Continue Edit, and a prominent orange Save Index button. The left sidebar under 'INDEXES' shows two tabs: 'General Index Settings' (active) and 'Searchable Attributes'. The 'General Index Settings' tab displays the following configuration:

Title *	Categories
Index	Magento / Category
Is Active *	Disabled
Position *	2

➔ Searchable Attributes

There are some available attributes here, admin will add attributes that they want with **Weight** for searching.

Note: 1-minimum weight and 10-maximum weight.

The screenshot shows the 'Edit Index 'Categories'' page with the 'Searchable Attributes' tab selected. The left sidebar is identical to the previous screenshot. The main content area shows the 'Attributes' section with a table of selected attributes:

Attribute	Weight	
Description	1	Delete
Page Title	2	Delete
Meta Keywords	3	Delete
Meta Description	4	Delete

Below the table is an 'Add Attribute' button. At the bottom right, a note states: '1 - minimum weight, 10 - maximum weight'. The 'Save Index' button remains orange and prominent.

Update

- When a new update is available, we will provide you with a new package containing our updated extension.
 - You will have to delete the module directory and repeat the installing steps above.
 - Flush the config cache. Your store and newly installed module should be working as expected.
-

Support

- We will reply to support requests after **2 business days**.
 - We will offer **lifetime free update and 6 months free support for all of our paid products**. Support includes answering questions related to our products, bug/error fixing to make sure our products fit well in your site exactly like our demo.
 - Support **DOES NOT** include other series such as customizing our products, installation and uninstallation service.
-

Once again, thank you for purchasing our extension. If you have any questions relating to this extension, please do not hesitate to contact us for support.
