Introduction to Magento Zoho CRM Integration

Magento Zoho CRM Integration is a prehensive module that provides automatic data synchronizing solution from your Magento sites to Zoho CRM.

Features

1. The Module supports the following synchronizations:
 - Customer Accounts in Magento to Leads, Contacts and Accounts in Zoho.
 - Products in Magento to Products in Zoho.
 - Promotions in Magento to Campaigns in Zoho.
 - Orders in Magento to Sales Orders in Zoho
 - Invoices in Magento to Invoices in Zoho.
2. Admin can easily define field mappings to select what data to sync.
3. Admin can view the report to see the sync history between the two platforms.

For each request, you can only sync ferwer than 100 records (<100 records/request).

System Requirements

Your store should be running on Magento Community Edition version 1.8.x or 1.9.x.

Configuration

First, you need to log into Magento's backend site. Click on **ZohoCRM Integration Configuration**.

Generating Zoho Auth token

- Method 1:
 - Using the URL format: https://accounts.zoho.com/apiauthtoken/nb/create?SCOPE=ZohoCRM/crmapi&EMAIL_ID=Zoho CRM Username or Email ID&PASSWORD=Your Zoho CRM Password
 - The generated output looks like this:

```
#  
#Tue Sep 29 00:02:22 PDT 2015  
AUTHTOKEN=3bd97fcc26dae3da61c9884d5ec7b9e9  
RESULT=TRUE
```

- Method 2:
 - Just leave the Auth token field blank, it will be automatically generated after you hit **Save Config**
 - However, it is important for you to clear active auth token after a while. If the number of active auth token goes above 10, the extension cannot function properly.
 - Click on your Profile picture at the top right corner, click on **My Account → Preferences → Sessions → Active Authtokens**
 - Delete active authtokens
