

Photo Review Installation Guide

Here we will guide you through the installation process of our extension. First off, open FileZilla, log in to your host as follows:

In the above example, we switched the local site to the extension directory, and the remote site to the code directory. Now on the remote site window, inside the app/code directory, create a folder named **Magenest** and go inside it. Now on your local site window, right-click on **Extension Name** and click **Upload**. The extension will be uploaded onto your host in a few minutes.

The second method will require you to compress the extension into .zip or .tar.gz format, then execute the following command in your **Command line /Terminal**:

```
scp <path to your extension> <ssh server>:<path to Magenest directory>
```

Then log into your SSH server, go to Magenest directory and execute the following command to decompress the module:

```
unzip <.zip compressed extension>
```

Or

```
tar -xzf <.tar.gz compressed extension>
```

Now go to your **Magento root directory**, say it's named **magento2**, and execute the following commands:

```
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento setup:static-content:deploy
```

After running all these, your Command line/Terminal window might look like this:

```

Module 'Magento_BundleSampleData':
Module 'Magento_Rss':
Module 'Magento_DownloadableSampleData':
Module 'Magento_Captcha':
Module 'Magento_OfflineShippingSampleData':
Module 'Magento_ConfigurableSampleData':
Module 'Magento_SalesSampleData':

Module 'Magento_WishlistSampleData':
Please re-run Magento compile command
[root@centos-2gb-sgp1-01 magento2]# sudo chmod -R 777 var pub
[root@centos-2gb-sgp1-01 magento2]#

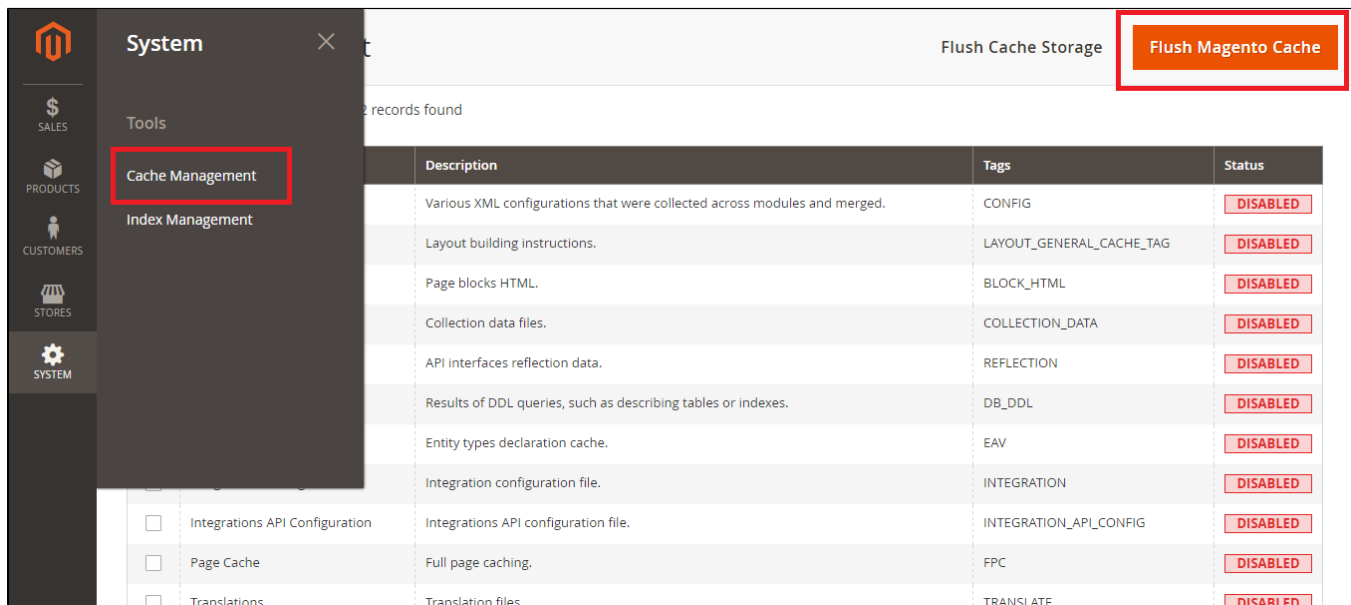

```

Finally, you need to flush the cache by either type this into the Command line/Terminal:

```
php bin/magento cache:flush
```

Or go to **System > Cache Management**. Click the following buttons to completely clear the store cache:

1. Flush Magento Cache
2. Flush Cache Storage
3. Flush Catalog Images Cache
4. Flush JavaScript/CSS Cache

The screenshot shows the Magento 2 Admin Panel interface. On the left, the 'System' menu is open, and 'Cache Management' is highlighted. In the top right corner, the 'Flush Magento Cache' button is highlighted with a red box. Below the menu, a table lists various cache types and their status.

	Description	Tags	Status
	Various XML configurations that were collected across modules and merged.	CONFIG	DISABLED
	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
	Page blocks HTML.	BLOCK_HTML	DISABLED
	Collection data files.	COLLECTION_DATA	DISABLED
	API interfaces reflection data.	REFLECTION	DISABLED
	Results of DDL queries, such as describing tables or indexes.	DB_DDL	DISABLED
	Entity types declaration cache.	EAV	DISABLED
	Integration configuration file.	INTEGRATION	DISABLED
<input type="checkbox"/>	Integrations API Configuration	INTEGRATION_API_CONFIG	DISABLED
<input type="checkbox"/>	Page Cache	FPC	DISABLED
<input type="checkbox"/>	Translations	TRANSLATE	DISABLED

Now you can go to your store and check if the extension is working as expected.
