

Sell on Instagram for Magento 2 Installation guide

Here we will guide you through the installation process of our extension. First off, open FileZilla, log in to your host as follows:

In the above example, we switched the local site to the extension directory, and the remote site to the code directory. Now on the remote site window, inside app/code directory, create a folder named **Magenest** and go inside it. Now on your local site window, right-click on Wrapper extension and click **Upload**. The extension will be uploaded onto your host in a few minutes. Correct folder structure would be **app/code/Magenest/[Extension Name]**

The second method will require you to compress the extension into .zip or .tar.gz format, then execute the following command in your Command Line /Terminal:

```
scp <path to your extension> <ssh server>:<path to Magenest directory>
```

Then log into your ssh server, go to Magenest directory and execute the following command to decompress the module:

```
unzip <.zip compressed extension>
```

Or

```
tar -xzf <.tar.gz compressed extension>
```

Now go to your **Magento root directory**, say it's named **magento2**, and execute the following commands:

```
sudo chmod -R 755 .  
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy  
sudo chmod -R 777 var pub
```

After running all these, your Command line/Terminal window might look like this:

```

Module 'Magento_BundleSampleData':
Module 'Magento_Rss':
Module 'Magento_DownloadableSampleData':
Module 'Magento_Captcha':
Module 'Magento_OfflineShippingSampleData':
Module 'Magento_ConfigurableSampleData':
Module 'Magento_SalesSampleData':
Module 'Magento_ThemeSampleData':

Module 'Magento_Variable':
Module 'Magento_Version':
Module 'Magento_Webapi':
Module 'Magento_SalesRuleSampleData':
Module 'Magento_CatalogWidget':
Module 'Magento_WidgetSampleData':
Module 'Magento_Wishlist':
Module 'Magento_WishlistSampleData':
Please re-run Magento compile command
[root@centos-2gb-sgp1-01 magento2]# sudo chmod -R 777 var pub
[root@centos-2gb-sgp1-01 magento2]#

```

Finally, you need to flush the cache by either type this into the Command Line/Terminal:

```
php bin/magento cache:flush
```

Or go to **System > Cache Management** and click **Flush Magento Cache**

The screenshot shows the Magento Admin interface. On the left, the 'System' menu is open, and 'Cache Management' is highlighted. In the top right corner, the 'Flush Magento Cache' button is highlighted with a red box. The main content area displays a table of cache types and their status.

	Description	Tags	Status
<input type="checkbox"/>	Various XML configurations that were collected across modules and merged.	CONFIG	DISABLED
<input type="checkbox"/>	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
<input type="checkbox"/>	Page blocks HTML.	BLOCK_HTML	DISABLED
<input type="checkbox"/>	Collection data files.	COLLECTION_DATA	DISABLED
<input type="checkbox"/>	API interfaces reflection data.	REFLECTION	DISABLED
<input type="checkbox"/>	Results of DDL queries, such as describing tables or indexes.	DB_DDL	DISABLED
<input type="checkbox"/>	Entity types declaration cache.	EAV	DISABLED
<input type="checkbox"/>	Integration configuration file.	INTEGRATION	DISABLED
<input type="checkbox"/>	Integrations API Configuration	INTEGRATION_API_CONFIG	DISABLED
<input type="checkbox"/>	Page Cache	FPC	DISABLED
<input type="checkbox"/>	Translations	TRANSLATE	DISABLED

Now you can go to your store and check if the extension is working as expected.
